Data Center 2.0: Redefining Security for Global Business Operations [WEBINAR]

July 2nd, 2013 / Vincent Orleck / 0 comments

SHARE 

Cloud computing, consumerization, big data, and mobility have enhanced the way business is conducted, while putting enormous strain on IT to keep users connected to their applications in a reliable and secure environment. The data center enables these IT megatrends and is becoming an increasingly large part of the security conversation.

Beyond physical security, most older data centers are ill-equipped to handle a cyber-attack on critical power and cooling infrastructure. In order to deliver an always-on, on-demand service level, enterprises, governments, and service providers need to take a closer look at the security profile of their data center

Watch IO Chief Security Officer Robert J. Butler address these security challenges in our recent webinar with Data Center Knowledge.
