IO Awarded Datacenter Dynamics' 2011 Extreme Data Center Deployment Honors

Phoenix, AZ - January 24, 2012

IO, the leading provider of next-generation **modular data center** technology and services, announced today that in the 5th Annual Datacenter Leaders' Awards, IO won the Extreme Data Center Deployment category for its Data Center 2.0 modular deployment at **IO New Jersey**.

"We are very happy and proud to have received this award and would like to thank DCD for the recognition. It is a tribute to the people at IO and their dedication to relentless innovation." said George Slessman, CEO of IO.

A record number of data center submissions were accepted this year from global industry leaders. The Extreme Data Center Deployment category specifically targeted innovation in design and operation of modular data centers when meeting the challenges associated with deployments in extreme or difficult locations. IO won for the compelling benefits offered by its IO.Anywhere® and IO.OS® modular hardware and software technology platform delivering Data Center 2.0 today.

In 2011, IO had major new accomplishments including the opening of the IO Factory, which produces the IO.Anywhere modular hardware products, and the opening of IO New Jersey, the largest modular data center in the world. To date, over 50 customers utilize IO's Data Center 2.0 platform and IO's proven solutions continue to decrease cost, increase energy efficiency, and empower IT groups with intelligent control of their data center infrastructure.

For more information on immediate Data Center 2.0 capacity delivered as a service and product, visit www.io.com or call 480-513-8500.

About IO

IO is a global leader in software-defined data centers and has pioneered the next generation of data center infrastructure technology. IO's integrated hardware and software data center technology platform offers enterprises, governments, and service providers an innovative way to deploy, provision, and optimize data center capacity anywhere in the world. IO technology lowers the total cost of data center ownership compared to traditional data centers, enabling dynamic deployment and intelligent control based on the needs of IT equipment and applications in the data center.
