# IO Data Centers Announces Launch Event For Scottsdale One

Scottsdale, AZ - September 26, 2007

## A New State-of-the-Art Data Center in Scottsdale, Arizona

IO Data Centers today announced the launch event for Scottsdale ONE, a new Data Center in Scottsdale, Arizona.

Designed, built and operated by data center professionals with more than 10 years of experience building customized data centers for the worlds largest companies and web properties, the unique design and operation of the colocation facility ensures that customers data is secure and reliable 24/7/365.

The Scottsdale ONE enterprise data center facility features dedicated data center suites, and colocation cabinets and cages for organizations of all sizes. In addition, the Scottsdale ONE data center site offers 24 megawatts of power, standby diesel generators, and highly robust mechanical systems supporting in excess of two acres of raised floor data center space. IO Data Centers guarantees 100% data center uptime by using only carrier-grade or better infrastructure to deliver its services.

Leasing Phoenix data center space with IO Data Centers gives customers the best available data center design and operation at a considerable savings when compared to the significant operating costs and capital required to build such a data center facility.

Anthony Wanger, Senior Managing Director, shared, "We are proud to be launching our latest data center, Scottsdale ONE. It offers a compelling power and utility infrastructure, and truly state-of-the-art amenities. We invite interested companies to contact us and arrange a tour."

## About IO

IO is a global leader in software-defined data centers and has pioneered the next generation of data center infrastructure technology. IO's integrated hardware and software data center technology platform offers enterprises, governments, and service providers an innovative way to deploy, provision, and optimize data center capacity anywhere in the world. IO technology lowers the total cost of data center ownership compared to traditional data centers, enabling dynamic deployment and intelligent control based on the needs of IT equipment and applications in the data center.
