IO Presents the Next-Generation, Intelligently Controlled Data Center at Gartner Symposium/ITxpo

Phoenix, AZ - October 12, 2011

IO, the leading provider of next-generation **modular data center** technology and services, announced today that **Anthony J. D'Ambrosi**, Chief Sales and Marketing Officer of IO, will speak at the Gartner Symposium/ITxpo.

This year's event, delivering the insights, tools and relationships necessary for transformative business technology strategies, will be held October 16-20 in Orlando, Florida at Walt Disney World.

Mr. D'Ambrosi will discuss "The Next-Generation, Intelligently Controlled Data Center – Data Center 2.0." In Data Center 2.0, modular data centers are delivered as hardware and software, and intelligently controlled through a single view, allowing clients to move away from legacy data centers that are poorly utilized, costly and take too long to deliver. Mr. D'Ambrosi will share real-world scenarios on the technological, operational and economic benefits of this modular approach. Mr. D'Ambrosi also will showcase the first-ever data center operating system that provides business intelligence, real-time visibility and control of the data center environment from a single view.

Mr. D'Ambrosi is scheduled to speak on Wednesday, October 19 at 3:00 p.m. EDT at the Walt Disney World Dolphin – Oceanic 1. For more information at the event, visit IO at booth MP5.

About IO

IO is a global leader in software-defined data centers and has pioneered the next generation of data center infrastructure technology. IO's integrated hardware and software data center technology platform offers enterprises, governments, and service providers an innovative way to deploy, provision, and optimize data center capacity anywhere in the world. IO technology lowers the total cost of data center ownership compared to traditional data centers, enabling dynamic deployment and intelligent control based on the needs of IT equipment and applications in the data center.
