

IO Factory - Data Center Manufacturing and Assembly - IO

Copyright © 2013 IO Data Centers

Manufactured

The IO Factory manufactures, assembles, tests, and commissions IO.Anywhere[®] modules for a growing base of customers and IO managed data center sites worldwide.

Agile

The IO Factory has developed and institutionalized standard processes using Design for Assembly (DFA), lean manufacturing methods, and a resilient supply chain to scale rapidly, based on customer demand, while maintaining steady state production.

Reliable

The IO.Anywhere product line is the first, and currently the only, modular data center product line to achieve UL 2755 listing from Underwriters Laboratories.

Sustainable

The IO Factory has a concurrent focus on modernization and operational excellence in order to drive technology innovation, promote continuous improvement, lower production costs, facilitate global expansion, and deliver competitive pricing.

Quality

Quality control is embedded in the product lifecycle through process management, component, and system testing, visual inspections, functional assessments, and performance reviews. Prior to shipment, every IO.Anywhere module undergoes a thorough pre-commissioning examination to verify that every component is functioning within defined operating parameters.
